*Kaset-klang, Chatuchak, Bangkok 10900 Thailand*

Three genera and ten species of sepiid squids are reported from Thai waters, both in the Gulf of Thailand and the Andaman Sea. They are:

*Sepiella inermis* (Férussac & d'Orbigny, 1835); *Metasepia tullbergi* (Appellöf, 1886); *Sepia pharaonis* Ehrenberg, 1831; *Sepia aculeata* d'Orbigny, 1848; *Sepia lycidas* Gray, 1849; *Sepia brevimana* Steenstrup, 1875; *Sepia recurvirostra* Steenstrup, 1875; *Sepia kobiensis* Hoyle, 1885; *Sepia arabica* Massy, 1916; and *Sepia prashadi* Winckworth, 1936. *Metasepia tullbergi*, *Sepia lycidas* and *Sepia kobiensis* are restricted to the Gulf of Thailand, South China Sea while *Sepia arabica* and *Sepia prashadi* are represented only in the Andaman Sea. Diagnosis and a provisional key to the identification of these squids are included.
