ABSTRACT

During three weeks of opportunistic collecting by the Tropical Marine Mollusc Programme identified 401 species in 96 families of molluscs in Vietnam and Cambodia. We identified 55 families (234 species) of gastropods, 36 families (144 species) of bivalves, 3 families (16 species) of cephalopods, and 2 families (3 species) of polyplacophorans. A checklist of these species is presented.
