**ABSTRACT** Two species of deep-water spider crabs, *Cyrtomaia suhmii* Miers, 1886, and *Platymaia alcocki* Miers, 1886, based on the materials of the BIOSHELF Project (1996–2000) are recorded for the first time from Thailand. It is also the first record of these two genera from the Andaman Sea coast of Thailand. Adult and juvenile forms of *C. suhmii* collected from the same locality confirm that *C. curviceros* Bouvier, 1915, is a junior synonym, the characters previously used to separate them explained by size and age.

**Key words:** new records, spider crabs, Decapoda, Majoidea, Inachidae, *Cyrtomaia*, *Platymaia*, Thailand
